

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

CONTENTS

<i>Official Field Crop Inspection:</i> H. L. BOLLEY.	193
<i>Courses in Physical Measurements for Students of Chemistry and Related Sciences:</i> DR. PAUL E. KLOPSTEG	199
<i>Patent Reform Prospects:</i> BERT RUSSELL	202
<i>Scientific Events:—</i>	
<i>Memorial to the late Frederick du Cane Godman; Exhibit of Marine Camouflage; The Philadelphia Meeting of the American Chemical Society</i>	204
<i>Scientific Notes and News</i>	206
<i>University and Educational News</i>	208
<i>Discussion and Correspondence:—</i>	
<i>The Valence of Nitrogen in Nitrous Oxide:</i> WILLIAM T. HALL. <i>A Snow Effect:</i> LEON ELMER WOODMAN. <i>On Measuring the Density of the Seventeen-year Locust Population:</i> DR. ENOCH KARRER	209
<i>Scientific Books:—</i>	
<i>Huntington's World-power and Evolution:</i> PROFESSOR CHARLES SCHUCHERT	211
<i>New Activities in the History of Science:</i> PROFESSOR LOUIS C. KARPINSKI	213
<i>Special Articles:—</i>	
<i>The Motion of a Gravitating Needle:</i> PROFESSOR CARL BARUS	214

MSS. intended for publication and books, etc., intended for review should be sent to The Editor of Science, Garrison-on-Hudson, N. Y.

OFFICIAL FIELD CROP INSPECTION

Now, when it has been forcibly brought out that the nation is vitally interested in farm results and that to get maximum production, some system of efficient supervision is essential it may not be out of place to call attention to a line of work in which official supervision would be beneficial and for various reasons quite essential, even under normal conditions. There is a phase of farm cropping, especially with cereals, in which the state is not only vitally interested but could become of great aid to growers, and to the consuming public. That line of work may perhaps be properly named official field crop inspection.

Great strides have been made, from the educational standpoint, in crop improvement during the past twenty-five years. It is apparent, however, to those who are closest to the work that improvement in cereal cropping is not nearly proportionate to the general gain in information as to possible cropping methods. There is much knowledge as to tillage, crop rotation, seed breeding, and much improvement in farm machinery and methods of crop handling through farm machinery; yet the processes which, from a scientific standpoint are necessary to high production of yield and quality are not in common practise and, when used, are so intermittently followed as to cause failure of crop improvement that should otherwise naturally follow.

If the above is true, it is worth the attention of those of us who are specialists in certain lines of agriculture to try to determine the reasons for such failure to follow best processes and to arrive at a remedy along the lines which may result in getting the process constructively carried on.

For example, much work is done in breeding seeds. The states and nation are at much expense to allow certain experts to study Men-
